# Asphalt Drum Plant

Asphalt drum plant is used to make the asphalt concrete. The drum shape of the plant gives it the name of asphalt drum plant. The drums are so designed that they can handle high temperature and would not deform. They are made from high quality steel to give them tough design and body.

# Asphalt Drum Mix Plant

The plant is used to make various kind of asphalt, macadam or other kind of stone that are important in making roads. The asphalt drum mix plant is fabricated using the best grade spare parts and materials. This

plant has a great production capacity and can work for a long time without posing any negative effect on the quality of asphalt produced. The shape and size of the drum are kept according to the utilization location and the amount of production that is required.

# Asphalt Batch Mix Plant

The range of asphalt batch mix plant is highly demanded among the clients because of its high production capacity that enhances the quality and speed of road construction process.

They are offered in different production capacity ranging from 80-160 tons per hour. These asphalt batch mix plant is mostly used in many industries and engineering applications.

# Mobile Drum Mix Plant

We are top manufacturer of mobile drum mix plant that are developed from high quality raw material. It has the capacity to produce more than 90 tons of hot mix asphalt in just an hour. The mobile drum mix plant is equipped with latest quality control tools and special load testing setup. They are made under strict inspection to ensure the efficiency and reliability of the plants.

# Wet Mix Macadam Plant

The macadam plant is made to process the ingredients and achieve a homogenous mixture that can prepare the base of road projects. They are made with the best technology to assure their productivity and reliability of the functioning of the plant. The wet mix macadam plant has a great capacity to work continuously for long time without affecting the quality of production.
